

## How Small Businesses Can Successfully Stay Connected

(NAPS)—According to the Small Business Administration, there are some 30 million small businesses in America. Lately, too many of them have been beset by big problems.

**From gig networks to anywhere voice apps, your telecommunications company helps you do business like nobody's business.**

### Good News

Fortunately, there's one thing companies can count on: quality, reliable broadband. [Businessservicesconnect.com](http://Businessservicesconnect.com) is helping small businesses rise to the challenge with multi-location business networks, reliable business internet, voice, video and local support whenever and wherever they need it. Here's how:

**Their networks, your gain.** They work with local broadband companies that own and operate their own networks. That means your small business traffic flows over modern, ultra-reliable data and communications networks your provider builds, operates and maintains. And that means more reliability and more accountability.

**They're as local as it gets.** Those logo-ized vans and vehicles are living proof that these companies operate right in your market, with service, support and on-the-street technicians who live and work where you do business. No provider is more aligned with your marketplace.

**They deliver.** Published service guarantees, 24x7 support and local agents are some of the reasons they're growing fast in the business category, with customers that run the gamut from small, solo offices to large, multisite enterprises.

**Low-priced packages.** You can bundle various combinations of business voice, Internet and television services for significant savings.

**What you want, they've got.** From single-line business voice solutions to carrier-grade networking options for large, multi-location enterprises, they exceed legacy providers for sheer breadth of service.

### Find a Provider

To learn more—or if you're not sure which cable provider offers business communications services most conveniently for you, or if your business operates in multiple locations—visit <http://www.businessservicesconnect.com>.
